

Certificate of Compliance Delta Zero Testing Program

8 January 2026

Eagle Protect FineTOUGH (indigo) nitrile gloves, lot # 100750610.

This letter certifies that these gloves comply with the patent pending Delta Zero™ testing standards established by Eagle Direct Ltd, trading as Eagle Protect.

To validate claims of regulatory compliance of our gloves, Eagle's proprietary Delta Zero™ program with third-party laboratory testing verifies Eagle nitrile gloves, from the lot listed above, have passed the following tests:

- Cleanliness (Test: MPN Microbial Counts and 16S Metagenomic Sequencing) - **Passed**
- Structural Integrity (Tests: AQL, Strength & Elongation) - **Passed**

In addition, Eagle Protect goes through supplier verification of stated FDA status for full food contact as per 21 CFR, 170-199 and specifically [21 CFR 177.2600](https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?fr=177.2600) (governing nitrile gloves).

<https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?fr=177.2600>

Though single-use gloves are not commonly a Critical Control Point in most food safety programs, Eagle Protect has elected to incorporate these enhanced testing safeguards beyond the basic FDA requirements set forth in regulations mentioned above.

Eagle's Delta Zero™ process addresses a wide range of hazards to mitigate glove risks to glove wearers, and to ensure the safety of handling products and the brand reputation of companies purchasing Eagle gloves.
